

Credible COVID-19 Information Sources

There are frequent comments and observations about the COVID-19 virus and the vaccines in news articles, in social media posts, and in conversations heard in and around where you work and live. Not all information comes from trusted sources. The Delaware Division of Public Health (DPH) recommends that you be sure the content you use for decision-making comes from subject-matter experts whose insights are based on peer-reviewed science. It's a good idea to fact-check any information with at least two sources.

Trusted Content Sources
